# SYXSENSE

Automated Vulnerability Management

Syxsense Secure

With every passing day, cybersecurity becomes a higher priority for organizations handling enormous amounts of valuable data and intellectual property. The demands of reducing the organization's attack surface while managing an intricate environment of devices and applications has never been greater, or more complex.
Enter Syxsense Secure

The world's first unified IT management and security solution that combines patch management, OS and security vulnerability scanning, and powerful no-code automation to deliver a complete, cloud-native solution that supports all your security and compliance needs.

With our task sequencing and automation engine, Syxsense Cortex™, you can build and deploy complex, automated workflows and enforce corporate policies across all your devices with a simple drag-and-drop interface. Plus, we do the hard work, so you don't have to: get full access to our extensive library of pre-built playbooks to get your devices and environment under control quickly.
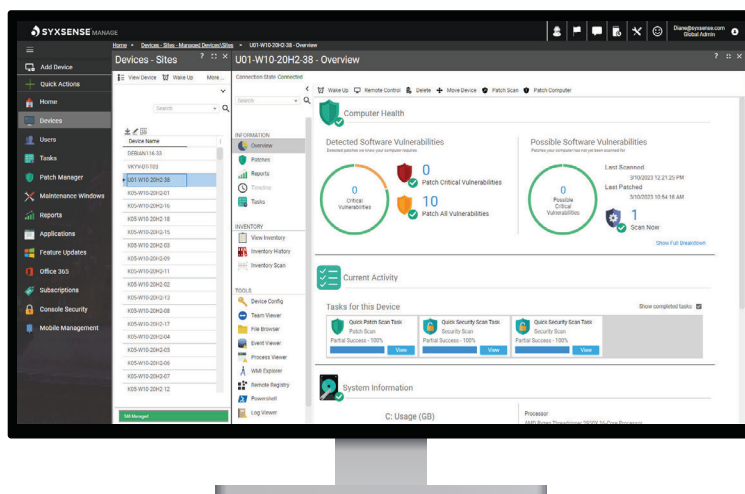

Identify Vulnerabilities
Detect and target OS and third-party patches and configuration issues

Automate Protection
Build responsive security workflows with no scripting required

Quarantine Devices
Isolate endpoints and kill malicious processes before they spread

Syxsense Secure Features

Device Discovery and Management

Syxsense is multi-tenant, cloud native and OS agnostic with cross-platform support that includes Windows, Mac, Linux, iOS, and Android so you can manage desktops, laptops, servers, virtual machines, and mobile devices (MDM) from one place.

Find, Prioritize, and Fix Vulnerabilities

Scan your systems, gain a clearer view of your cyber asset attack surface and reduce the risk to your enterprise by identifying which devices are vulnerable and prioritizing resolutions on the most critical assets.
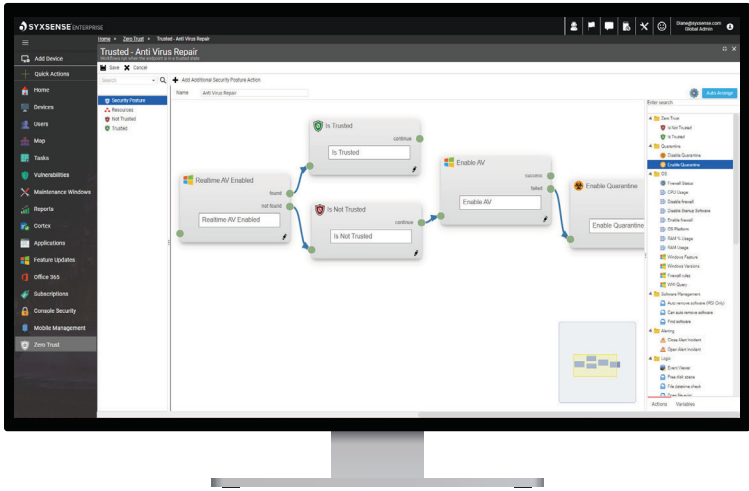

Simplify Security and Management with Automation Workflows

Syxsense Cortex™ simplifies complex IT and security processes with a no-code, drag-and-drop interface. Create automated workflows that connect complex processes from beginning to end. Potential risks are identified quickly, with scan, quarantine, and patch update task sequences initiated the moment a change is detected.

Patch Management and Deployment

Syxsense detects OS and third-party patch updates, as well as security configuration issues, and prioritizes management and deployment to devices that pose a critical threat. Stay up to date on releases, prioritize critical patches, and target vulnerable devices with accurate detection and rapid deployment.

Windows Upgrade "In-Place"

Because Syxsense handles Windows Feature Updates separately from other OS and third-party deployments, you can leverage your own ISOs to keep devices up to date with all supported Windows versions.

Software Deployment and Troubleshooting Tools

Access devices, provide assistance, and resolve issues remotely with a secure, cloud-based connection from any web browser.

Customizable Dashboards

Customize and share discoveries and actionable insights with key stakeholders with interactive visualizations of vital security metrics.

Compliance Reporting

Generate proof of compliance reports for regulatory agency audits, such as HIPAA, PCI, and SOX.
