

Modernize your database environment.

Save time and reduce risk with end-to-end solutions from Quest®.

From rapid data growth and cloud adoption to DevOps and data privacy, today's IT challenges are mounting. Addressing these issues with native tools and manual processes is expensive and time-consuming. Plus, it leaves you vulnerable to downtime, data breaches, costly fines, slow database performance and lost business.

But what if you could manage your growing database environment quickly, easily and affordably? This would empower you to shift more resources toward innovation to drive your business forward. With end-to-end database management solutions from Quest, you'll save time and money while reducing risk. Maximize your current database investments and gain support for the platforms you'll adopt in the future with Quest.

MANAGE

Build and deploy higher-quality code faster and save time on database administration while strengthening compliance.

MONITOR

Gain unrivaled visibility across all your database platforms – from *one* console.

MOVE

Safely move data with the complete Oracle replication solution, no costly add-ons or management packs needed.

MANAGE

Toad® – Reduce the time and effort required to develop and manage databases.

Toad for Oracle Sensitive Data Protection – Quickly find and protect sensitive data in Oracle databases.

Toad DevOps Toolkit – Integrate database development into DevOps.

Toad Edge – Simplify development and management of MySQL, Postgres, and MariaDB environments.

Toad Data Modeler – Easily build high-quality data models, no expertise needed.

Toad Data Point – Simplify data access, preparation, provisioning and report building.

Toad Intelligence Central – Improve collaboration by sharing data with non-Toad users.

Benchmark Factory® for Databases – Easily test database changes to avoid production issues.

ApexSQL – Automate SQL Server database development and administration to increase productivity, reduce costs, strengthen compliance and more.

MONITOR

Foglight® for Databases – Gain unrivaled visibility into cross-platform database performance from a single console.

Spotlight® on SQL Server Enterprise – Diagnose SQL Server performance issues quickly and easily to improve database health.

Spotlight Cloud – SQL Server performance monitoring and diagnostics. Powered by the cloud.

MOVE

SharePlex® – Ensure HA and DR, offload reporting and more with affordable data replication for Oracle and Amazon Web Services.
